

Abstract

In order to provide improved monitoring of riveted
5 connections during rivet setting, a rivet setting tool
comprising a head piece for holding a rivet, a device for
gripping a rivet pin and a pulling apparatus connected to the
device for gripping a rivet pin is provided, which
10 additionally comprises a device for measuring the tension of
the pulling apparatus. Using the setting implement according
to the invention, a cause of a fault can be determined by
means of a comparison between measured values and stored
values.
